

IN THE ABSTRACT:

Please delete the current abstract and substitute the following therefor:

--A communication apparatus has a communication unit that transmits data to a designated destination, and a management unit that manages ID information determined for each user and address location information associated with the ID information, wherein the address location information indicates a location that stores address information for designating the destination to transmit the data by said communication unit. The user inputs the ID information via an input unit, and an obtaining unit specifies the address location information managed by said management unit based on the input ID information, communicate with an external apparatus via a network based on the address location information, and obtains the address information residing at the external apparatus corresponding to the location specified by the address location information. The communication unit transmits the data to the destination designated from the address information obtained by said obtaining unit.--
